## Technologies

*In pursuit of Technical Excellence*

Mohwiti Technologies is an innovative and dynamic black-owned and managed company, focusing on innovative cutting edge software development, ICT training and providing custom software solutions that improve lives.

Mohwiti Technologies has developed into a company that is renowned for its continued contribution in the Open Source Software (OSS) community.

Mohwiti Technologies core products are:

eSchoolMan and Osmis

This innovative electronic school management software was developed by Mohwiti in 2001. It was specifically developed to encourage and support participation by all key stakeholders in a school environment, ie school managers, administrators, educators, and learners.

This software resulted in the initiation of the OSMIS project, whose key stakeholders included the CSIR, Wits and SchoolNet SA. The project was focused on delivering an enhanced version of the school management software. The project was completed during 2003 and piloting has been successfully conducted.

The solution is integrated and provides fast and easy access to management information to support decision-making. This product is a key input of the Open Source School Management System (OSSMS) Project.

eSchoolMan's features and benefits include:

- Comprehensive Management Information
- Grades and Attendance
- Reports and Report Cards
- Student Scheduling.

Mohwiti Technologies core services are:

- Software Development: extensive skills and experience to develop new software products using OS technologies and other programming languages, inc Delphi, Java, PHP, etc
- Software Customisations: software development skills to tailor existing OS software packages to meet unique customer needs
- Software/System Training: ability to provide hands-on training to customers
- Software Support: ability to provide on-site and remote support for OS software and solutions
- Research & Development: ability to develop and/or find the right solution to meet client's unique needs.
